Professional summary

Senior Software Engineer with 5 years of experience building production web applications used across 50+ countries. Strong focus on React.js, TypeScript, Next.js, Node.js, PostgreSQL, and frontend architecture. Experienced in building shared UI components, improving application performance, reviewing code, mentoring engineers, and working with business stakeholders. I also build full-stack and infrastructure projects involving Docker, Redis, BullMQ, WebRTC, IoT, and Raspberry Pi. Currently exploring Go, Rust, and IoT systems, with a growing interest in backend engineering, systems programming, and connected devices.

Technical skills

Frontend: React.js, TypeScript, Next.js, JavaScript (ES6+), React Query, Tailwind CSS, MUI, Fabric/Fluent UI, HTML, CSS

Backend: Node.js, TypeScript, Python, FastAPI, Drizzle ORM, SQLAlchemy, PostgreSQL, MySQL, REST APIs, JWT

Mobile: React Native, Flutter, Expo, Flutter Provider

DevOps and infrastructure: Docker, Docker Compose, Git, GitHub, Bitbucket, CI/CD, Redis, BullMQ, Traefik, Cloudflare Tunnel

IoT and systems: IoT, Raspberry Pi, Python, Go (exploring), Rust (exploring), WebRTC, Mediasoup

Other: Firebase, WorkOS, Azure Communication Services, Google Maps APIs

Professional experience

Ingram Micro

Apr 2026 – Present

Senior Software Engineer – Frontend

Mumbai, Maharashtra, India

- Drive frontend development of the Claiming Microfrontend within X4A, an in-house claims-processing platform built with React.js and TypeScript. Manage the Claiming MFE codebase and make implementation-level technical decisions across claim submission, validation, claim matching with credit notes, and status tracking workflows. The platform is used to reclaim around \$12 billion annually.
- Take a leading role in the Claiming MFE frontend team by coordinating implementation work, reviewing technical approaches, and helping engineers resolve codebase-level issues while working within the broader X4A architecture defined by the platform architecture team.
- Define and maintain the frontend structure of the Claiming MFE and build shared UI components used across 15+ teams, making new feature development faster.
- Lead code reviews and mentor 2 engineers on React.js and TypeScript practices, reducing PR turnaround time by around 20%.
- Improved frontend performance through code splitting and lazy loading.

Ingram Micro

Dec 2021 – Mar 2026

Associate Software Developer

Mumbai, Maharashtra, India

- Developed and maintained the IM360 CRM web application used across 50+ countries using React.js, TypeScript, and Fabric/Fluent UI. The application supports business operations that generate approximately 7% of Ingram Micro's yearly revenue.
- Improved application performance by 30% through more efficient state management and frontend implementation.
- Diagnosed and resolved production incidents with 90% faster turnaround, reducing disruption to business users.
- Developed "Hive", a Flutter-based mobile application for office desk reservations, improving real-time booking processes and employee efficiency by 60%.
- Led development of "IM Learning", a workforce development platform that helps employees track skills and align career growth.
- Worked with business stakeholders to understand requirements, define technical solutions, and implement application workflows for global teams.
- Conducted 25+ technical interviews and contributed to engineering hiring.
- Trained 30+ developers in React.js through a structured two-week training program.

Projects and open-source contributions

NMT Deploy - Self-Hosted PaaS Next.js, React, TypeScript, Node.js, PostgreSQL, Drizzle ORM, Redis, BullMQ, Docker [View]

- Built a self-hosted PaaS that deploys GitHub repositories to Docker with framework detection, generated production domains, encrypted environment variables, deployment history, and live build/runtime logs.
- Designed a monorepo architecture with separate web, API, worker, database, queue, and Docker packages. The

web app uses Next.js and tRPC, while the API and worker handle deployment orchestration.

- Implemented background deployments with BullMQ, Redis, and Docker, covering repository cloning, Docker builds, deployment state, and log persistence.
- Added Traefik-based routing with generated application domains and optional Cloudflare Tunnel exposure for public deployments.
- Built deployment history and log workflows with branch, commit, status, timestamps, streamed logs, fullscreen log viewing, and redeploy actions.
- Added encrypted application environment variables and redeploy prompts when environment or build configuration changes.

NMT Store - E-commerce Platform Next.js, React Query, Node.js, TypeScript, PostgreSQL, Drizzle ORM, Azure Communication Service, WorkOS [\[View\]](#)

- Built a full-stack e-commerce platform for electronic products with product listing, search, pagination, detailed product pages, and customer reviews.
- Implemented cart, checkout, and order management workflows with order history and order-detail views.
- Integrated Microsoft Azure Communication Services for transactional messaging and notifications, and WorkOS for authentication and enterprise SSO.

Meet Flow - Mediasoup Video Conferencing App Node.js, TypeScript, React, Drizzle ORM, PostgreSQL, Mediasoup [\[View\]](#)

- Building a low-latency WebRTC video conferencing application with Mediasoup for real-time audio and video communication.

AutoPi Hub - IoT-Based Home Automation System Python, FastAPI, SQLAlchemy, Raspberry Pi [\[View\]](#)

- Built an IoT home automation platform using Raspberry Pi that lets users remotely control connected devices, improving system efficiency by 45% through optimized API calls.
- Built the FastAPI backend with SQLAlchemy, achieving 30% faster data processing and communication with smart devices.

Control Nest - Mobile App for Smart Home Control React Native, React Query, Expo [\[View\]](#)

- Built a React Native application for remote smart home control with real-time automation, reducing manual user intervention by 50%.

Tasks Management App Flutter, Back4App, Flutter Provider SDK [\[View\]](#)

- Developed a real-time task management system with a personalized dashboard using Back4App, increasing productivity by 35%.

Assets Management App Flutter, Firebase, Flutter Provider SDK [\[View\]](#)

- Built a financial transaction tracker with Firebase authentication and data storage, providing secure access and 99.9% uptime reliability.

Auth NodeJS MySQL - Authentication System Node.js, TypeScript, MySQL, JWT [\[View\]](#)

- Built a JWT-based authentication system with access control, reducing unauthorized access by 80%.

Additional Projects [\[View\]](#)

- Assets Management (Flutter)
- Cryptowall (React, Python)
- Apps Toolchain Tracker (Next.js, PostgreSQL)
- My Portfolio (React, Tailwind)
- My Networks (React, Firestore)
- Train Ticket Booking (React, Node.js, MUI)
- Music Player (React, Tailwind, FirestoreDB)
- Ping Me Chat (Flutter, Firestore RTDB)
- Travel Companion (React Native, Google Maps)
- Additional personal and open-source projects available on GitHub

Education

BITS Pilani - Work Integrated Learning Programmes <i>Master of Technology (M.Tech), Software Systems, Specialization in IoT</i>	Jan 2023 - Jan 2025 CGPA: 7.87
Lokmanya Tilak College of Engineering <i>Bachelor's Degree, Mechanical Engineering</i>	2017 - 2020 CGPA: 7.60
M.H. Saboo Siddik College of Engineering <i>Diploma, Mechanical Engineering</i>	Aug 2014 - Jun 2017

Additional information

Spoken languages: English, Urdu, Hindi
